- Natural Numbers (N): 1,2,3,...
- Whole Numbers ( $\mathbb{W}$ ): 0, 1, 2, 3, ...
- Integers ( $\mathbb{Z}$ ): ..., -3, -2, -1, 0, 1, 2, 3, ...
- Rational Numbers ( $\mathbb{Q}$ ): Can be written as  $\frac{a}{b}$  where  $b \neq 0$
- Irrational Numbers: Cannot be written as  $\frac{a}{b}$  (e.g.,  $\sqrt{2}, \pi$ )
- **Real Numbers** (**R**): All of the above combined!

- Integers cannot be fractions or decimal numbers.
- Irrational Numbers cannot be expressed as fractions.
- Their decimal parts are neither terminating nor repeating.

< □ > < □ > < □ > < □ > < □ >

Sac

- Integers cannot be fractions or decimal numbers.
- Irrational Numbers cannot be expressed as fractions.
- Their decimal parts are *neither terminating nor repeating*.

# Yes!!!

イロト イヨト イヨト イヨト

Sac

#### Try this:

Check  $\sqrt{2}$  in your calculator. What do you notice?

- Yes! It is approximately 1.414...
- Can you write this as a simple fraction? No!
- The decimal goes on and on *without repeating*.

#### Try this:

Check  $\sqrt{2}$  in your calculator. What do you notice?

- Yes! It is approximately 1.414...
- Can you write this as a simple fraction? No!
- The decimal goes on and on without repeating.

Try  $\sqrt{3}$  and  $\sqrt{7}$ 

What do you observe? Just like  $\sqrt{2}$ , their decimal parts neither terminate nor repeat!

- The square root of all prime numbers is irrational.
- This means  $\sqrt{2}, \sqrt{3}, \sqrt{5}, \sqrt{7}, \sqrt{11}, \ldots$  are all irrational.
- They cannot be written as fractions.
- Their decimal parts go on forever.

## Cheerssss! Keep exploring numbers!
